

The Select Trees Advantage

+ Superior Genetics

- Own-root clones will mature consistently in the landscape as opposed to seedling and bud-grafted trees that will mature unpredictably.
- Own-root clones provide superior genetics and performance, such as:
 - Hightower® Willow Oak
 - Alta® Southern Magnolia
 - Highpoint® Nuttall Oak
 - Allée® Lacebark Elm
 - Highbeam® Overcup Oak
 - Nellie Stevens Holly
 - Panache® Shumard Oak

Hightower® Willow Oak

+ Proper Nursery Culture

- Central leaders must be maintained throughout the tree's development in the nursery; a central leader allows the canopy to be raised easily.
- Select Trees' Root Enhancement process:
 - Propogating (rooting) genetically superior trees.
 - Hand planting liners for proper root orientation – prevents potential challenges with root circling and planting depth.
 - Dense, clay soil consistent and adaptable with many poorly drained landscape sites with low soil oxygen.
 - 100% Root Pruning to create dense, fibrous root systems.
 - Harvesting with Optimal spades to capture more of the roots.

Highbeam® Overcup Oak

+ Proper Installation and Maintenance

- Communication with other project TEAM members about proper tree care information, including:
 - Handling
 - Staging
 - Planting
 - Initial & Long-Term Irrigation and Maintenance

Highbeam® Overcup Oak

= SUSTAINABLE LANDSCAPE TREES
